

FinNexus

Finance Evolved

The FNX token is a turnkey DeFi investment.

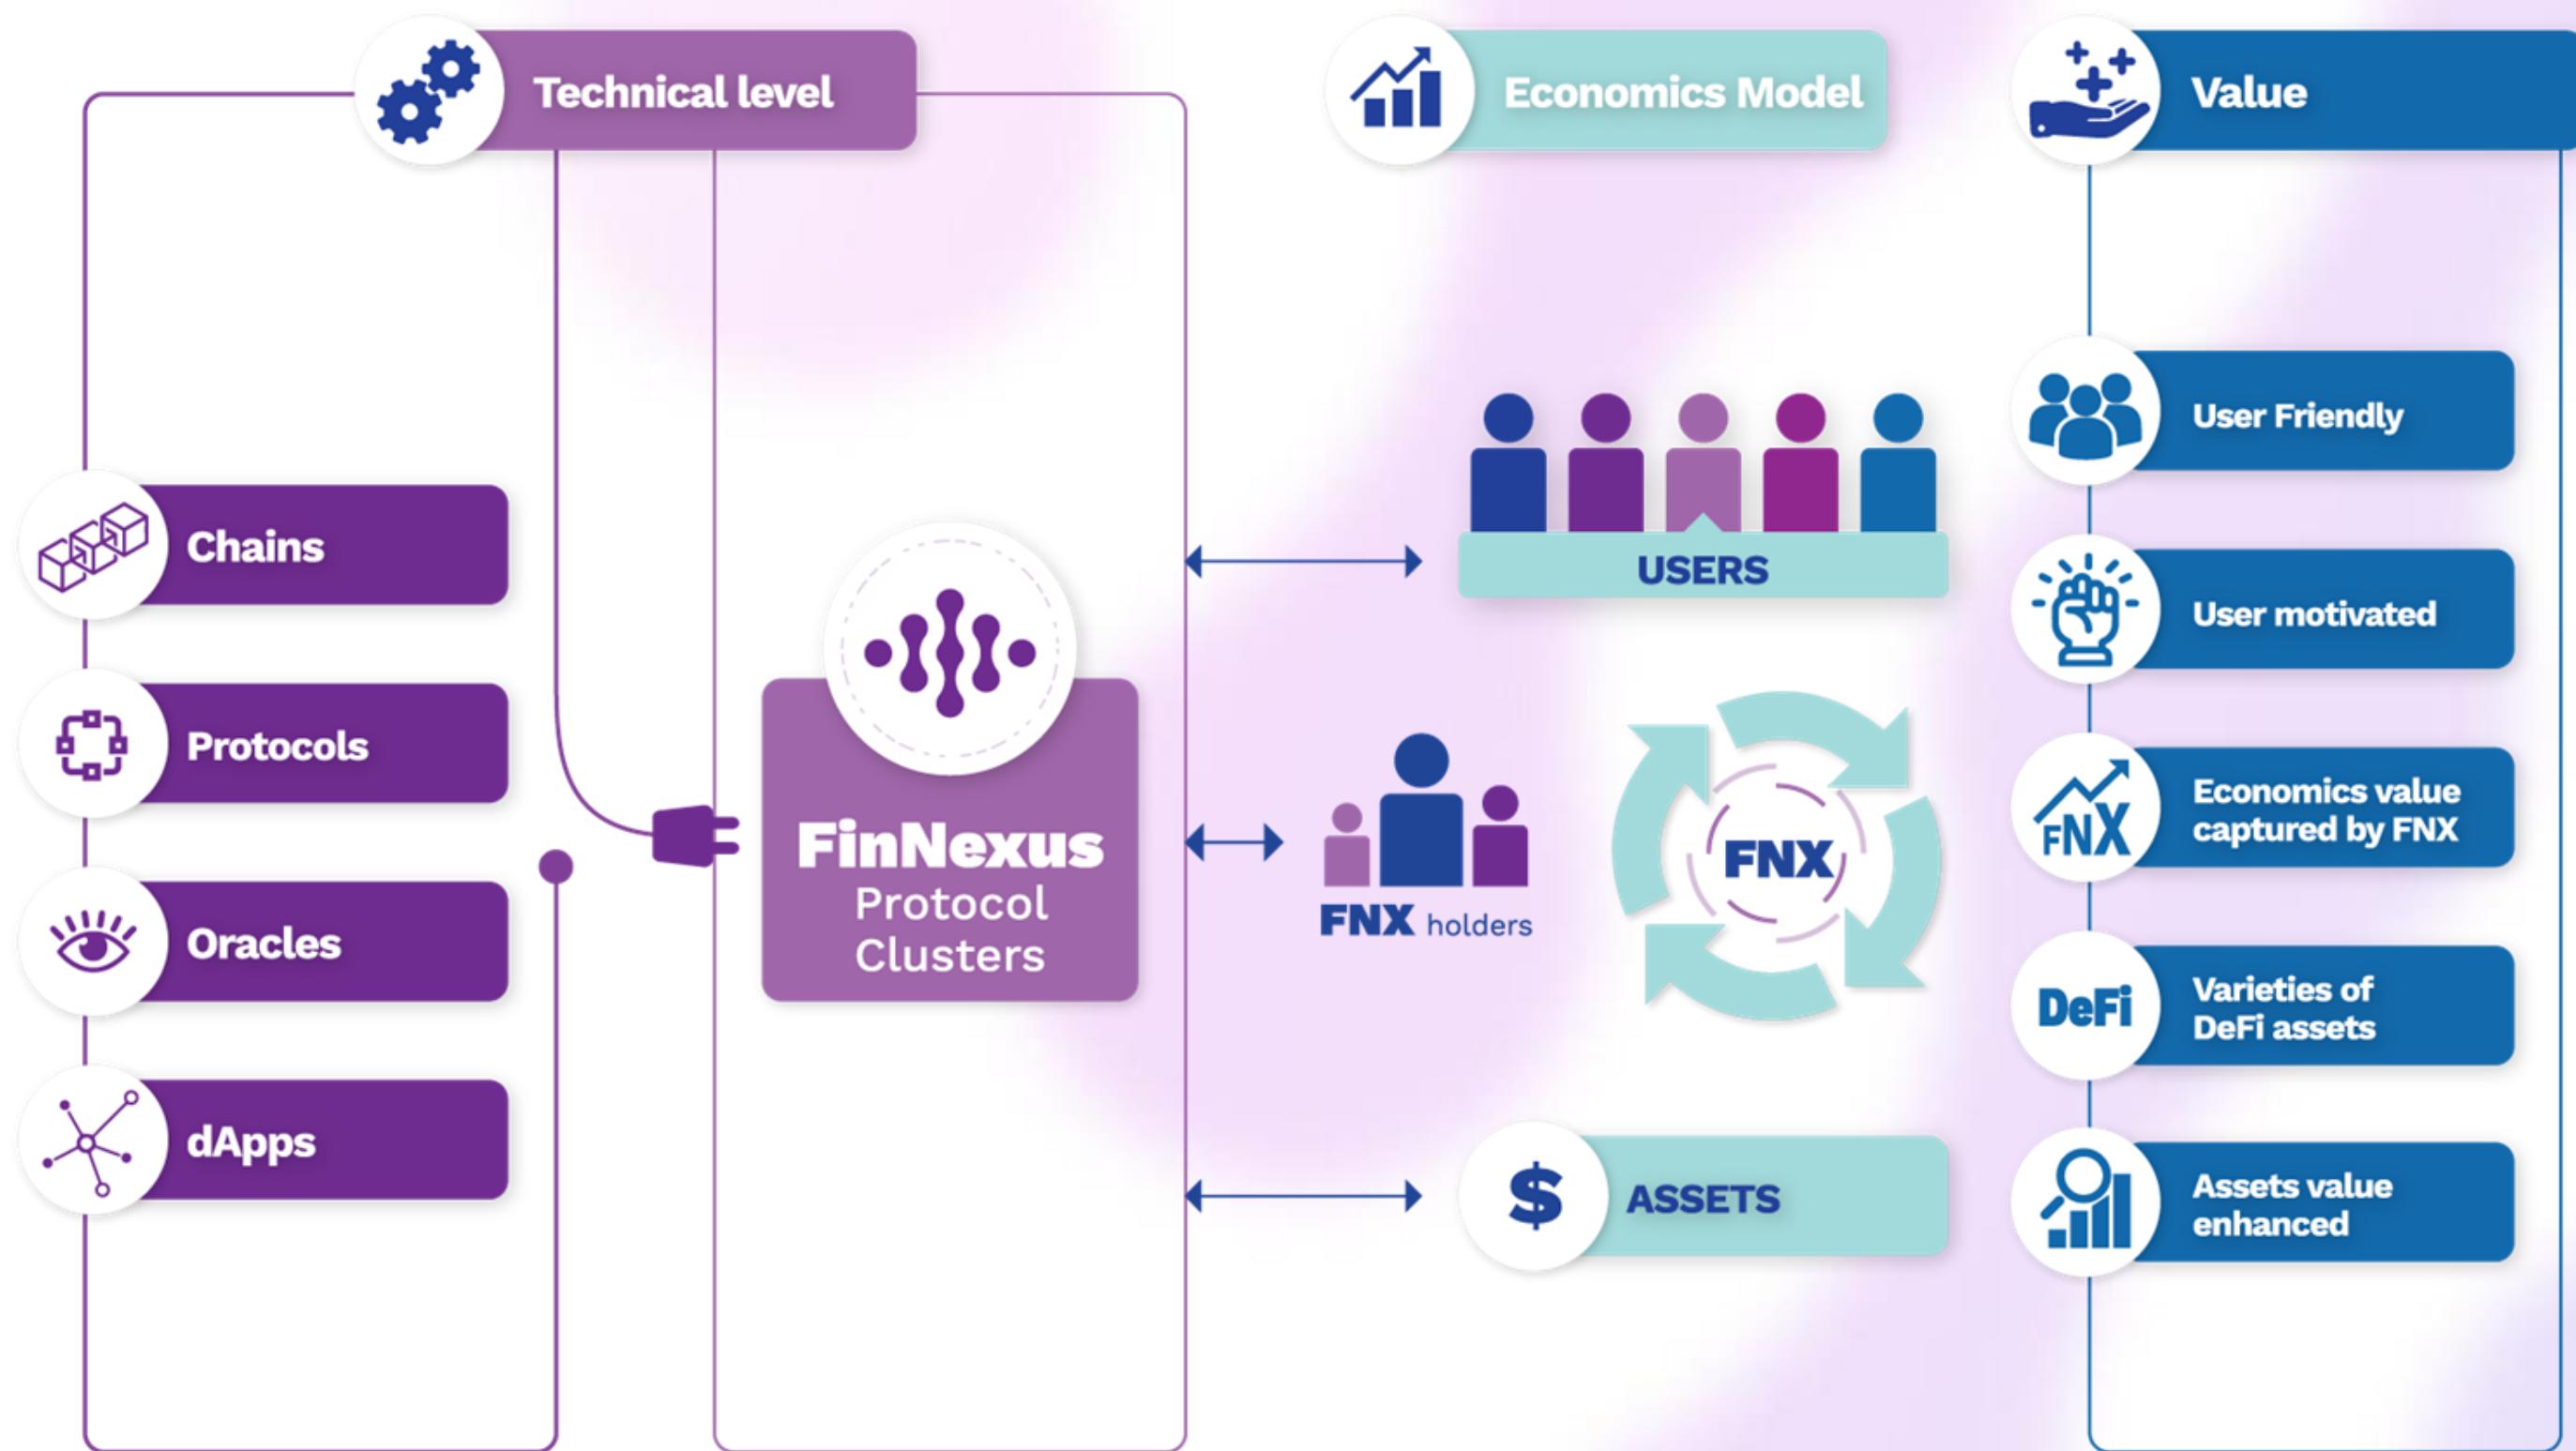

Unparalleled team & advisors, quality exchange listings, 30,000+ online community, top-notch developers & a robust token economy intensely focused on value capture.

It's all already there.

FinNexus' Vision

- FinNexus advances open finance by establishing one-stop shop protocol clusters.
- FinNexus protocol clusters will cross different chains and engage other protocols, oracles, Dapps, etc.
- The FNX token is the value transmission vehicle that attracts and adheres capital into the ecosystem.

FinNexus' Roadmap in Phase one before 2022

2019 H2

- ✓ FinNexus team building
- ✓ Early-stage investors
- ✓ Whitepaper goes public
- ✓ Website goes live

2020 H2

- ✓ WRC20 and ERC20 exchange
- ✓ Decentralized options (FPO) V0.1 launched
- ✓ Decentralized options (FPO) V1.0 launched
- ✓ Uniswap Pool for FNX/ETH
 - MASP options model on Ethereum and Wanchain
 - List on 2 more top exchanges
 - Liquidity mining incentives

2021 H2

- More assets in FPO
- Middleware and application layer protocols articulated into protocol clusters
- Open more APIs to public
- Launch FPO V2.0
- Integrate more chains

2020 H1

- ✓ ICTO accomplished
- ✓ Listed on 2 exchanges
- ✓ Completed framework for decentralized options model

2021 H1

- Over 50% of circulating FNX locked in FPO smart contracts
- Deliver a functional middleware protocol layer
- Open parts of APIs to public
- FPO live on more chains
- Decentralized oracles

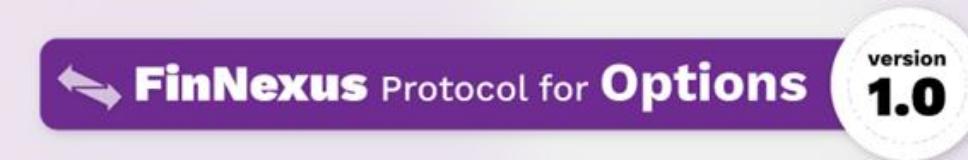

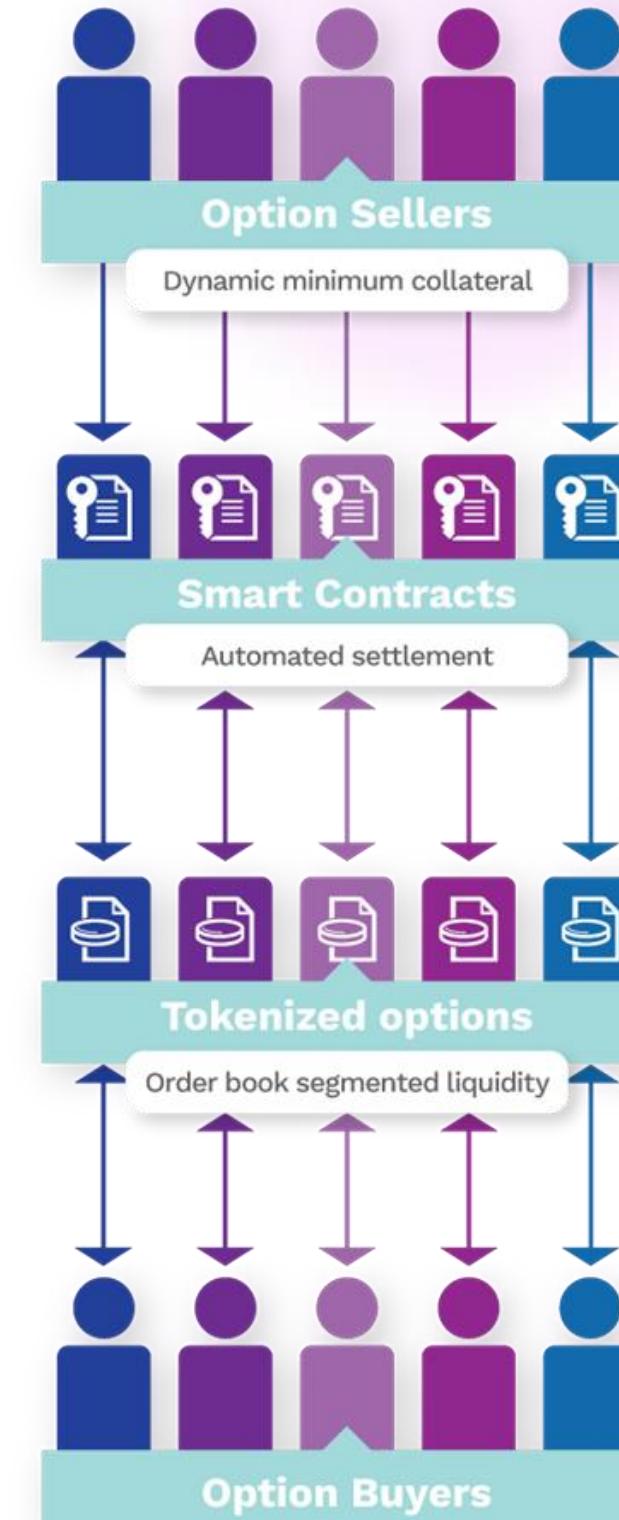

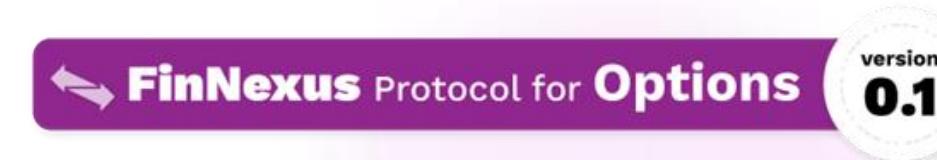

2022

- Top 50 CMC ranking
- Standardize middleware protocols and improve connections at each layer
- Initiate a P2P protocol network
- Establish DAO

FinNexus Protocols for Options (FPO)

- FPO has 2 decentralized options models:
 - 1) a **tokenized model**, FPO v0.1 and
 - 2) a **pooled liquidity model**, FPO v1.0 or MASP, which stands for Multi-Asset Single-Pool
- The two models exhibit distinct differences in settlement and liquidity mechanisms, market-making, collateral requirements and related smart contracts.

Why Pooled Liquidity

Liquidity solution tailored to DeFi

Problems with the existing model

Mismatched risk-return profiles of buyers & sellers

High risks for option sellers

Sellers are mostly professional dealers

Lacks proper hedging mechanism

Large capital needed to boost liquidity

Limited choices for buyers

Solutions with Liquidity Pool

Risk and return are distributed throughout a monolithic pool

Single counterparty for all options

Automatic return distribution

Risks diversified across the pool

Highly capital-efficient collective liquidity

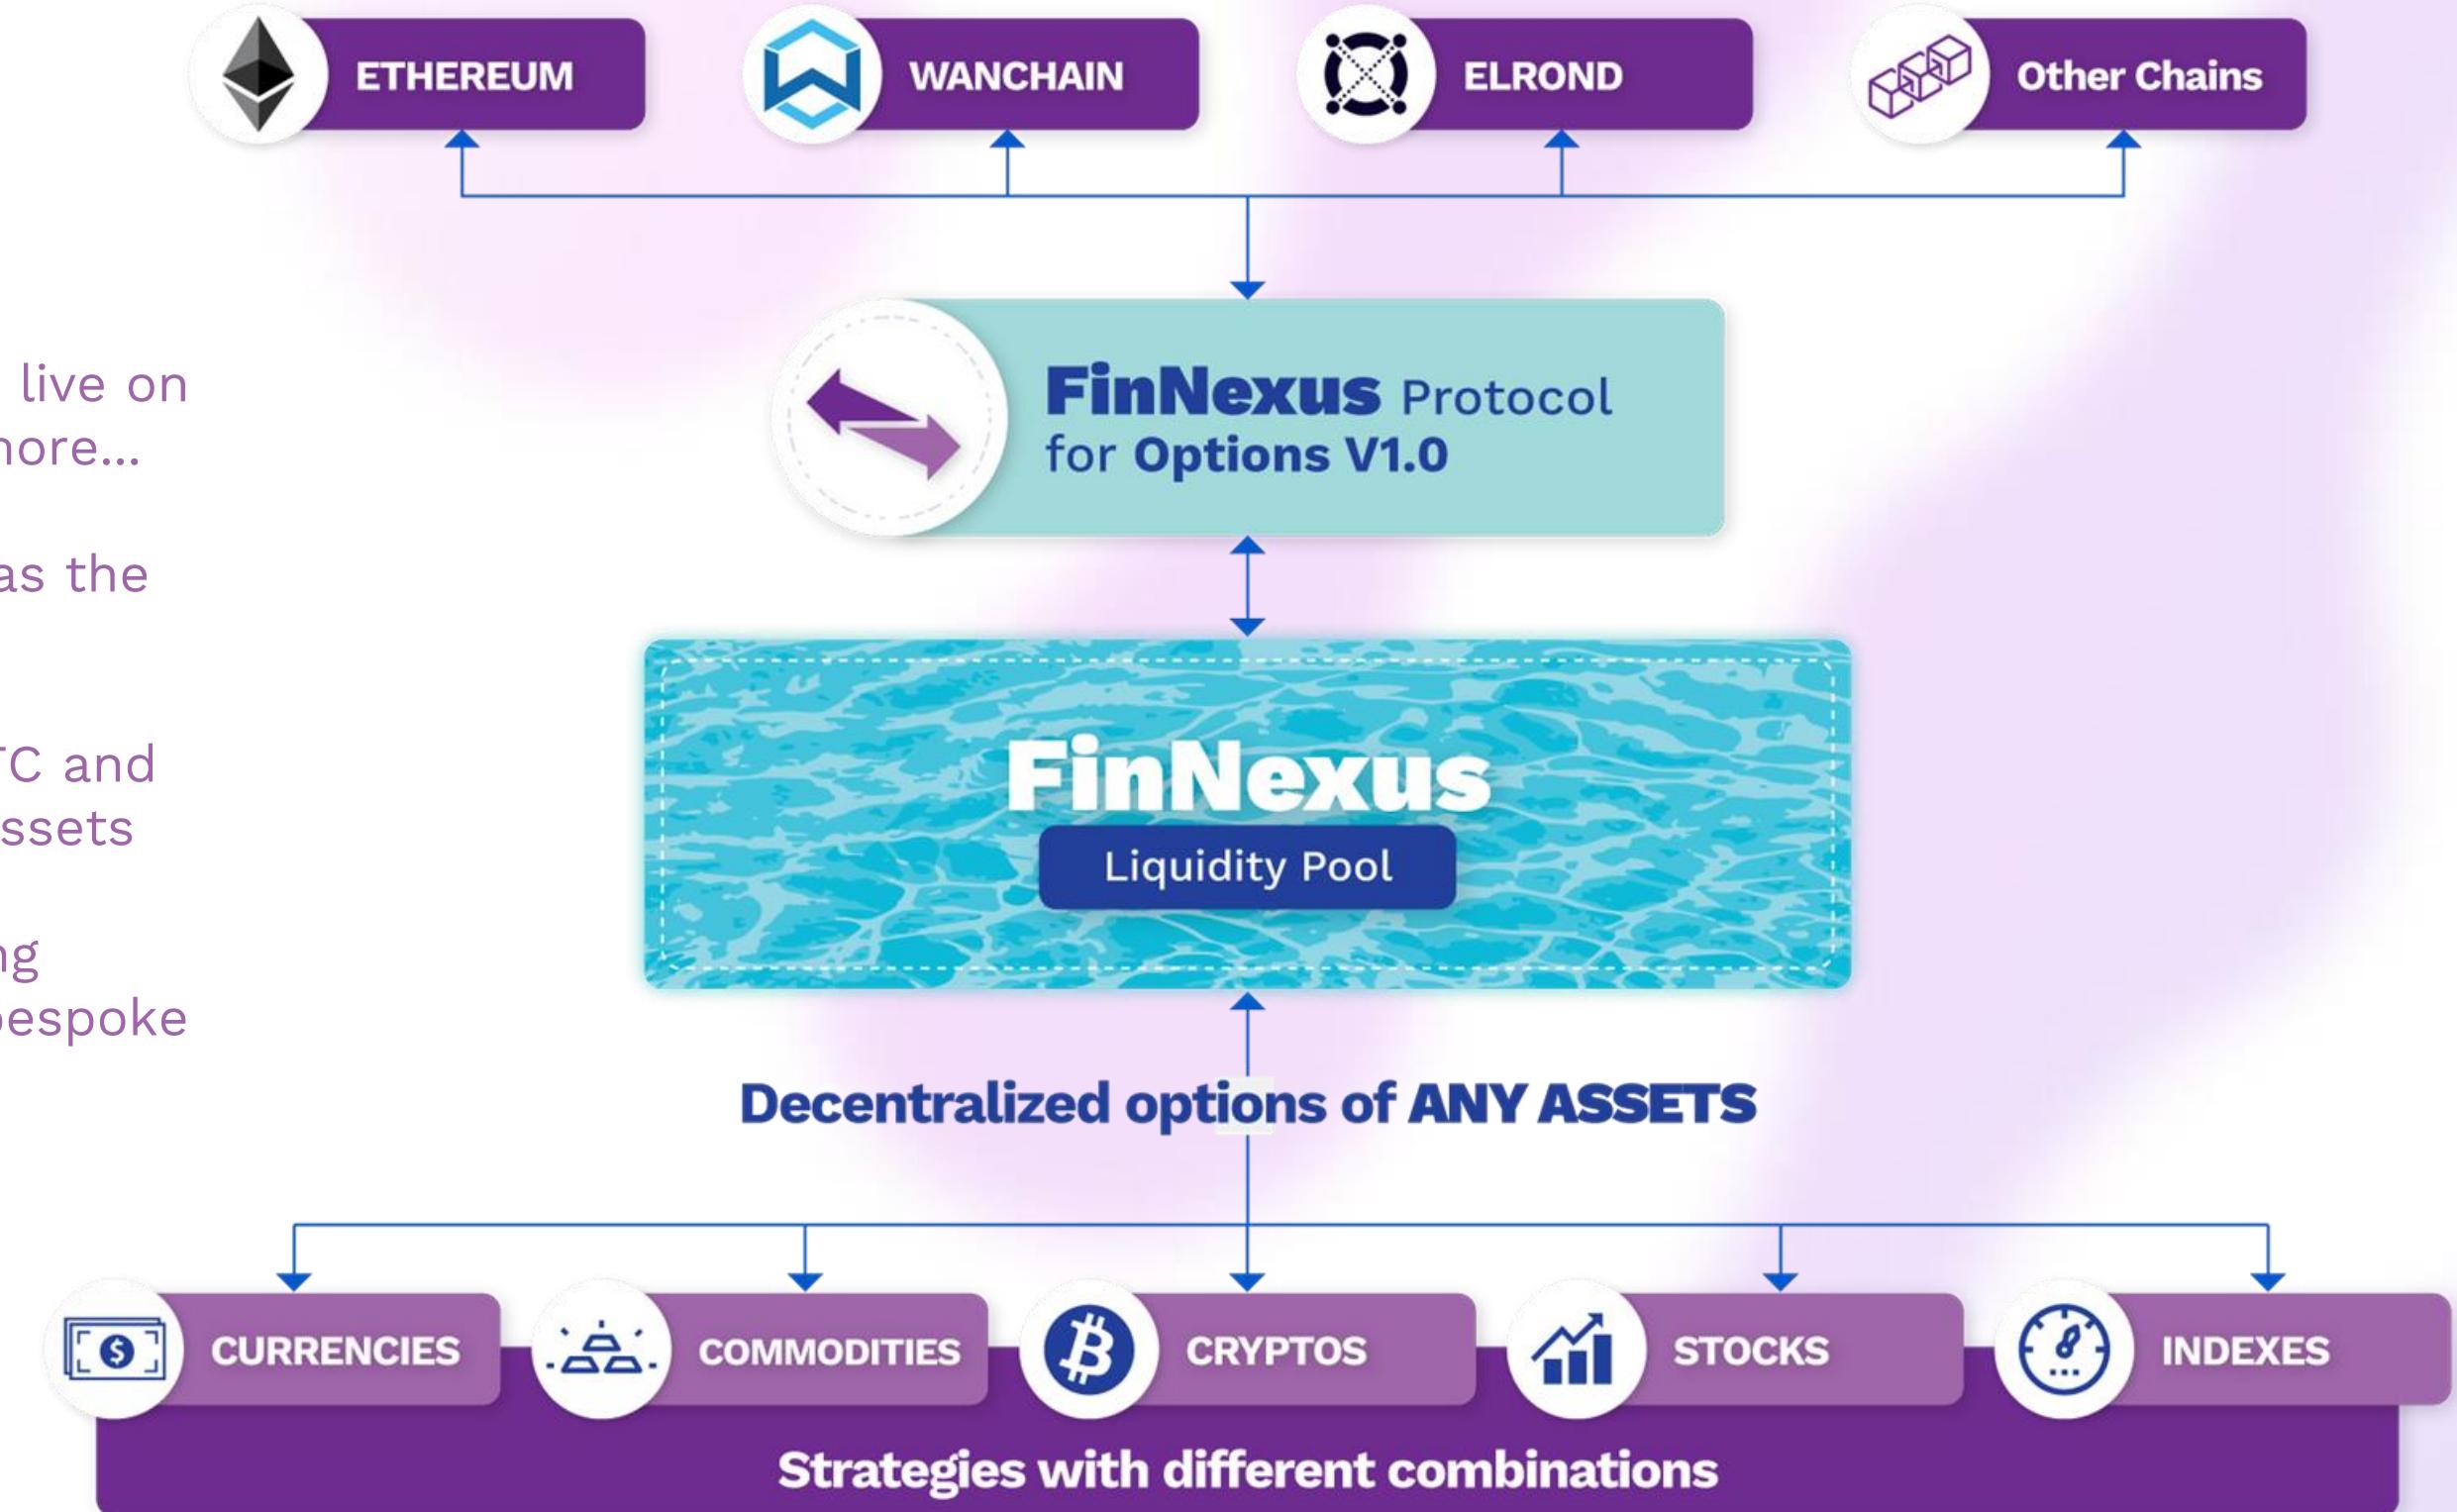

Customized options for the buyers

FPO V1.0—the Universal Option Protocol

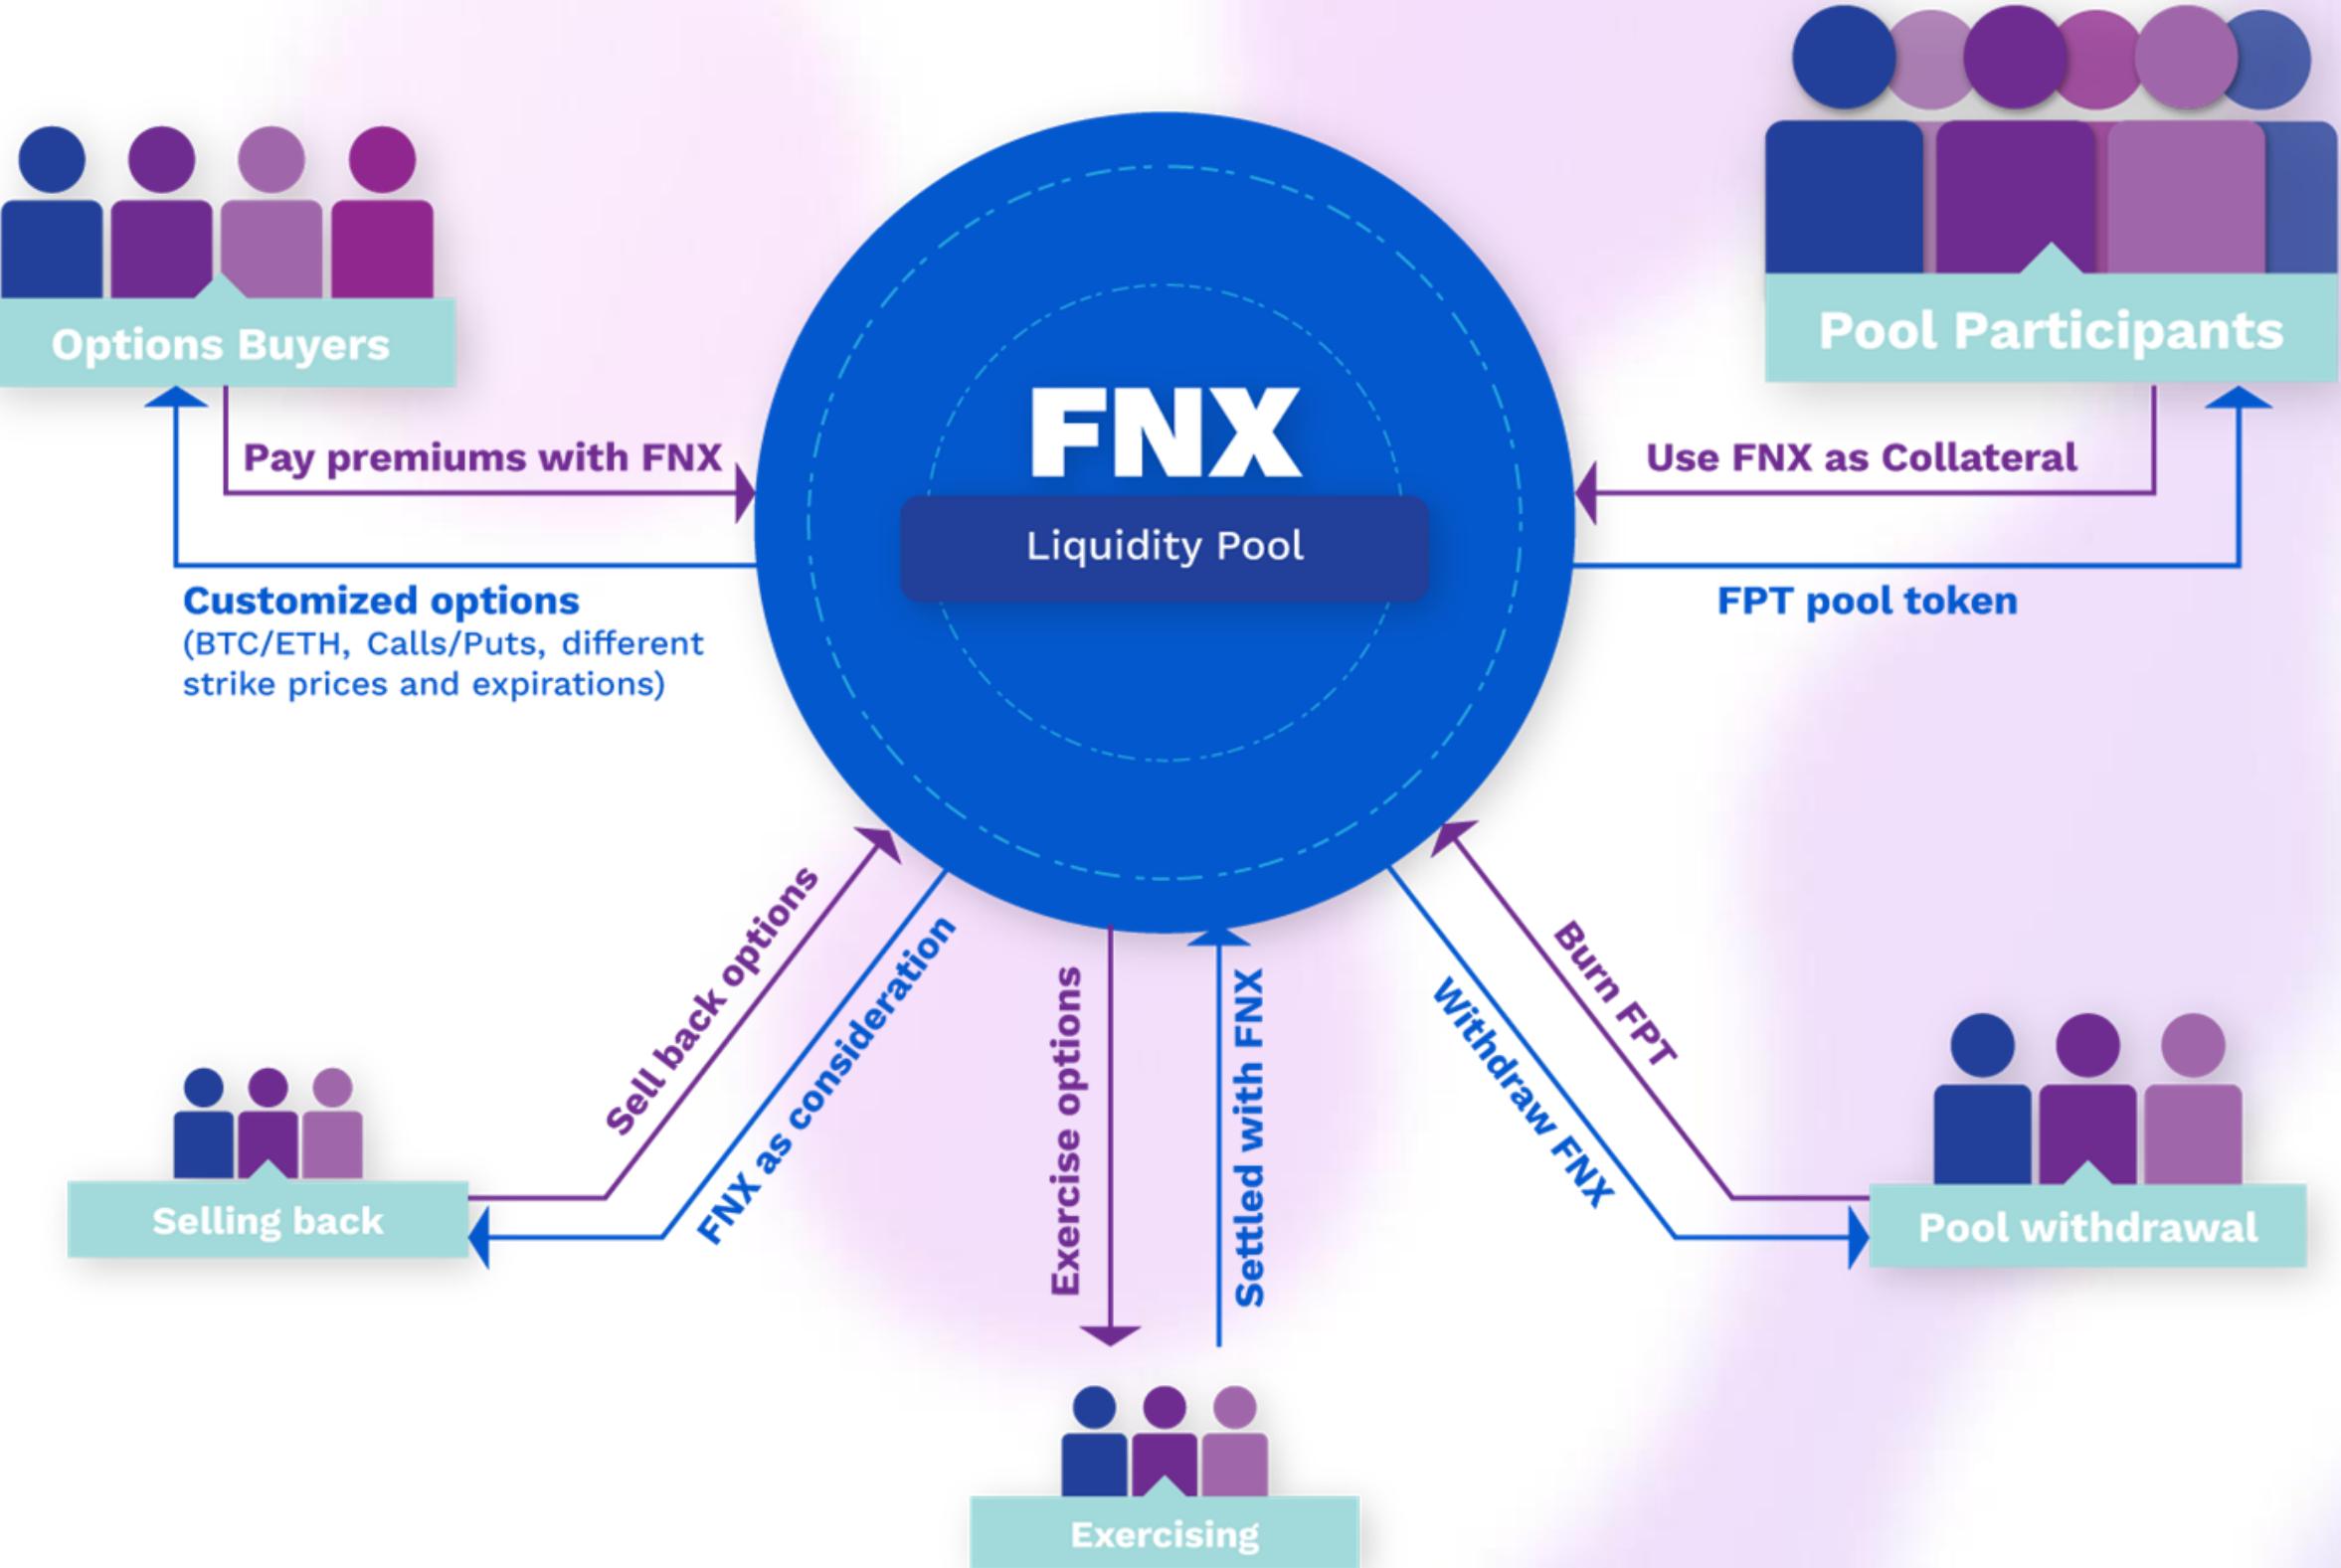

A protocol to create and trade options with any underlying assets

- Chain-Agnostic Approach: FPO will live on Ethereum, Wanchain, Elrond and more...
- A single collective pool is created as the seller of all the options
- The initial underlying assets are BTC and ETH, but can be extended to any assets
- Universal support for any underlying assets, as well as for a variety of bespoke investment strategies

FPO V1.0 Liquidity Pool Mechanism

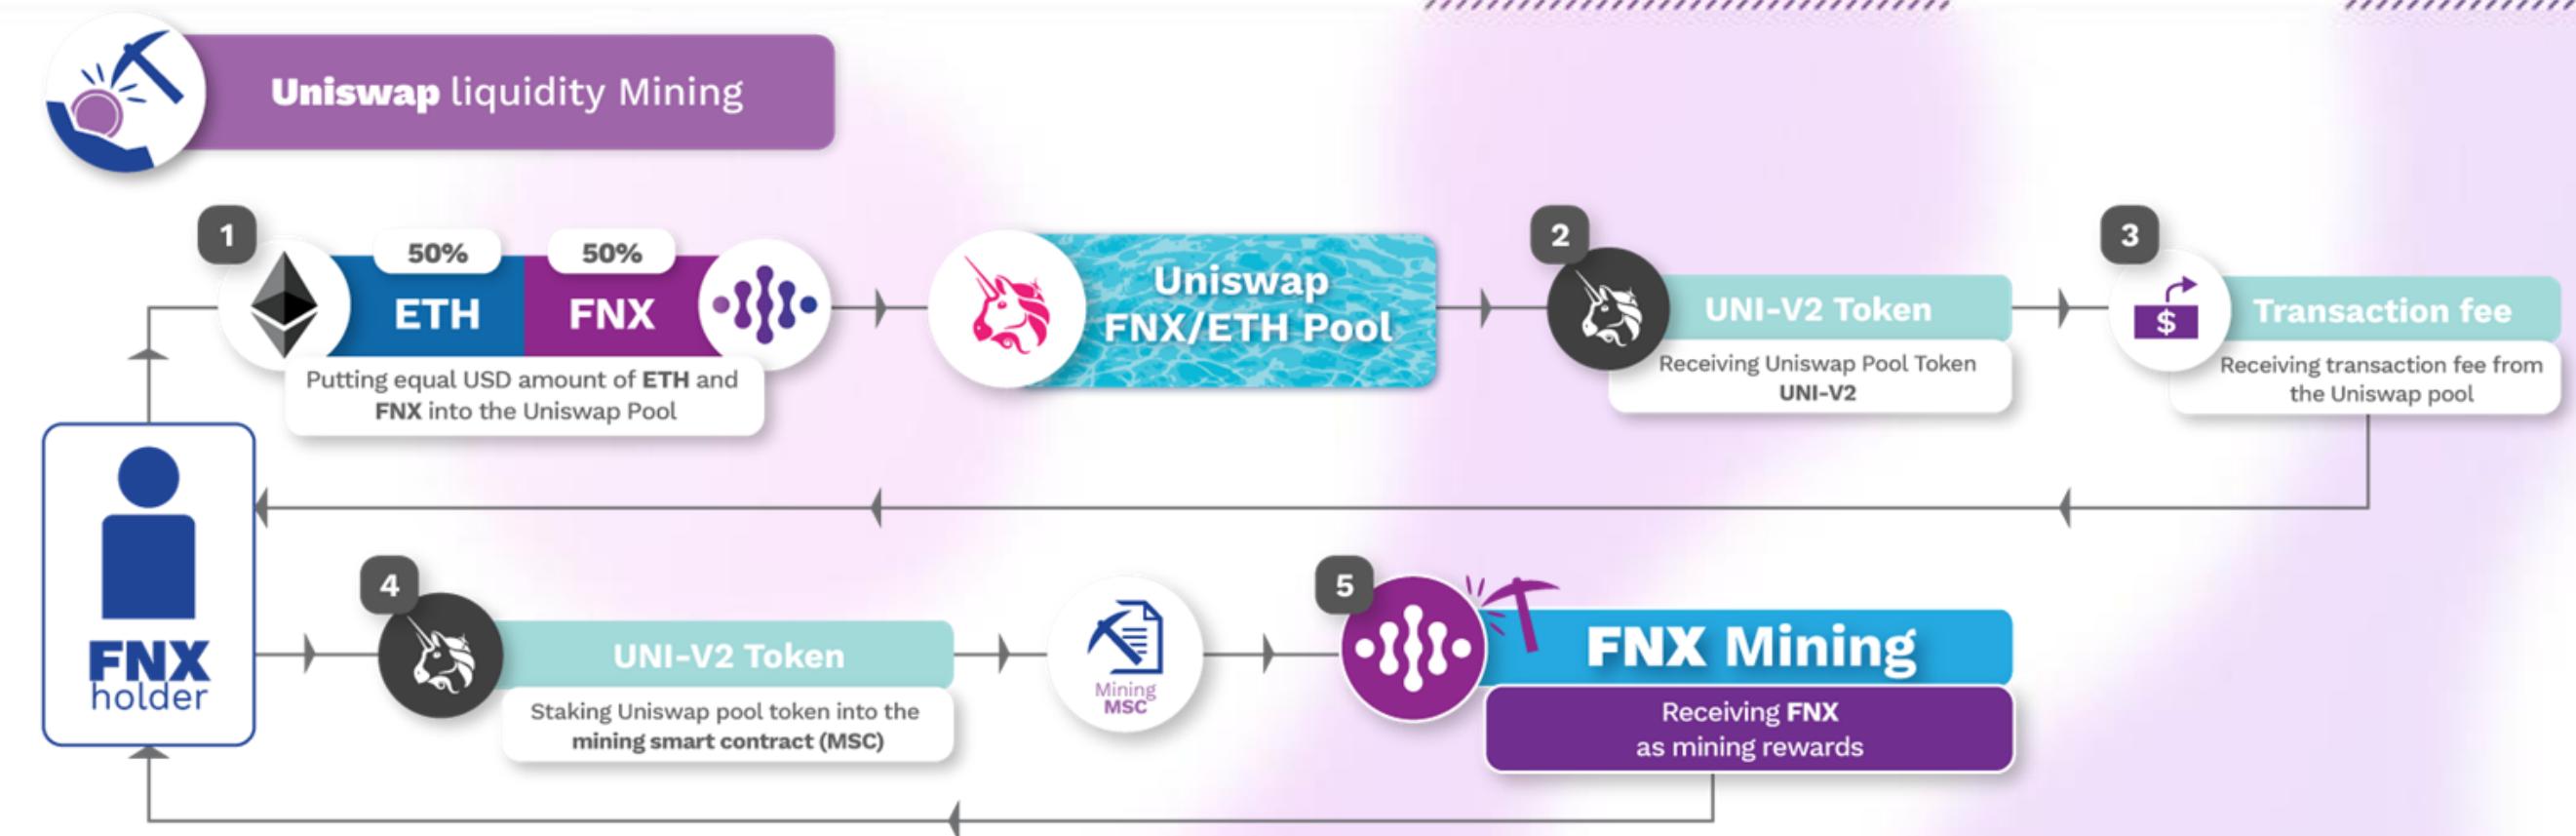

- A single monolithic liquidity pool is created as the seller of all options.
- All options are American type and can be exercised or traded against the pool;
- Buyers can tailor their options exposure according to their own needs.
- Security is maintained by high collateralization ratio.
- FPT pool token are redeemed (and subsequently burned) for remaining principal, accrued options premiums and FNX mining incentives.

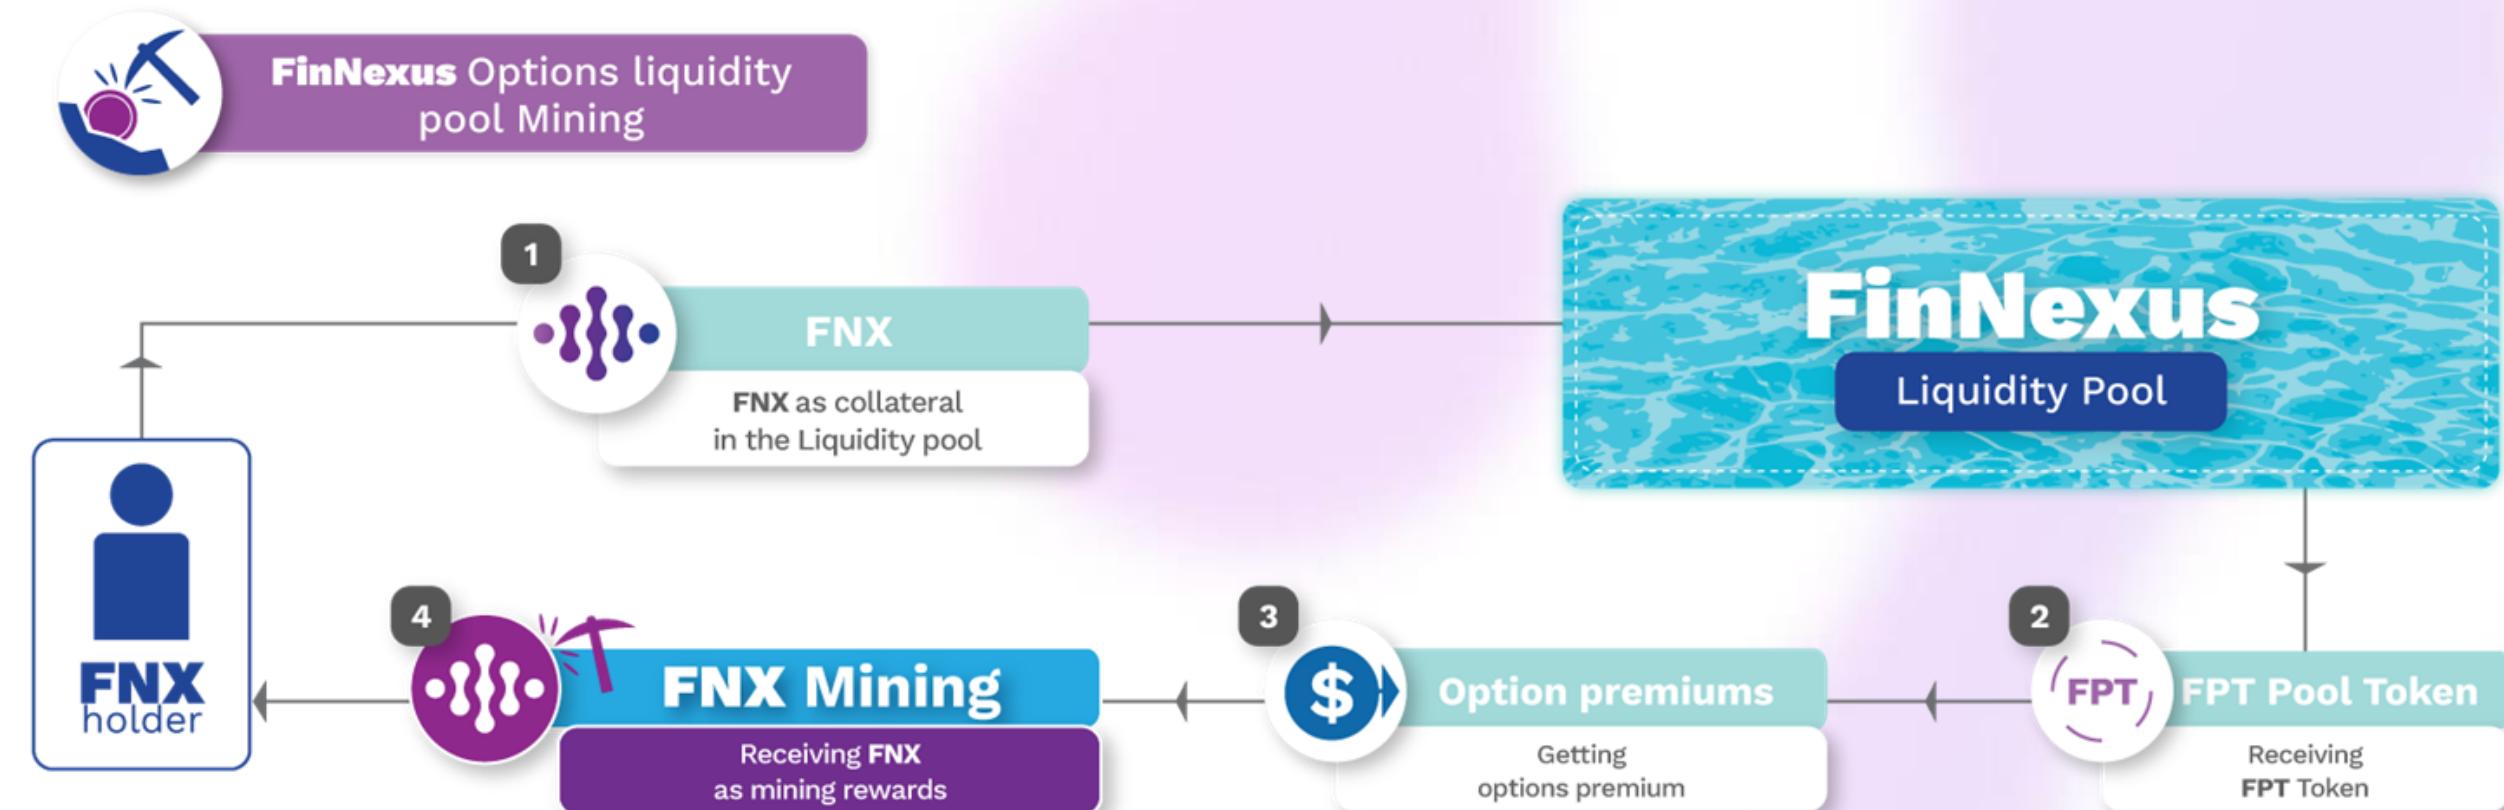

Liquidity Mining in Uniswap and the FinNexus Liquidity Pool

Two mining incentives

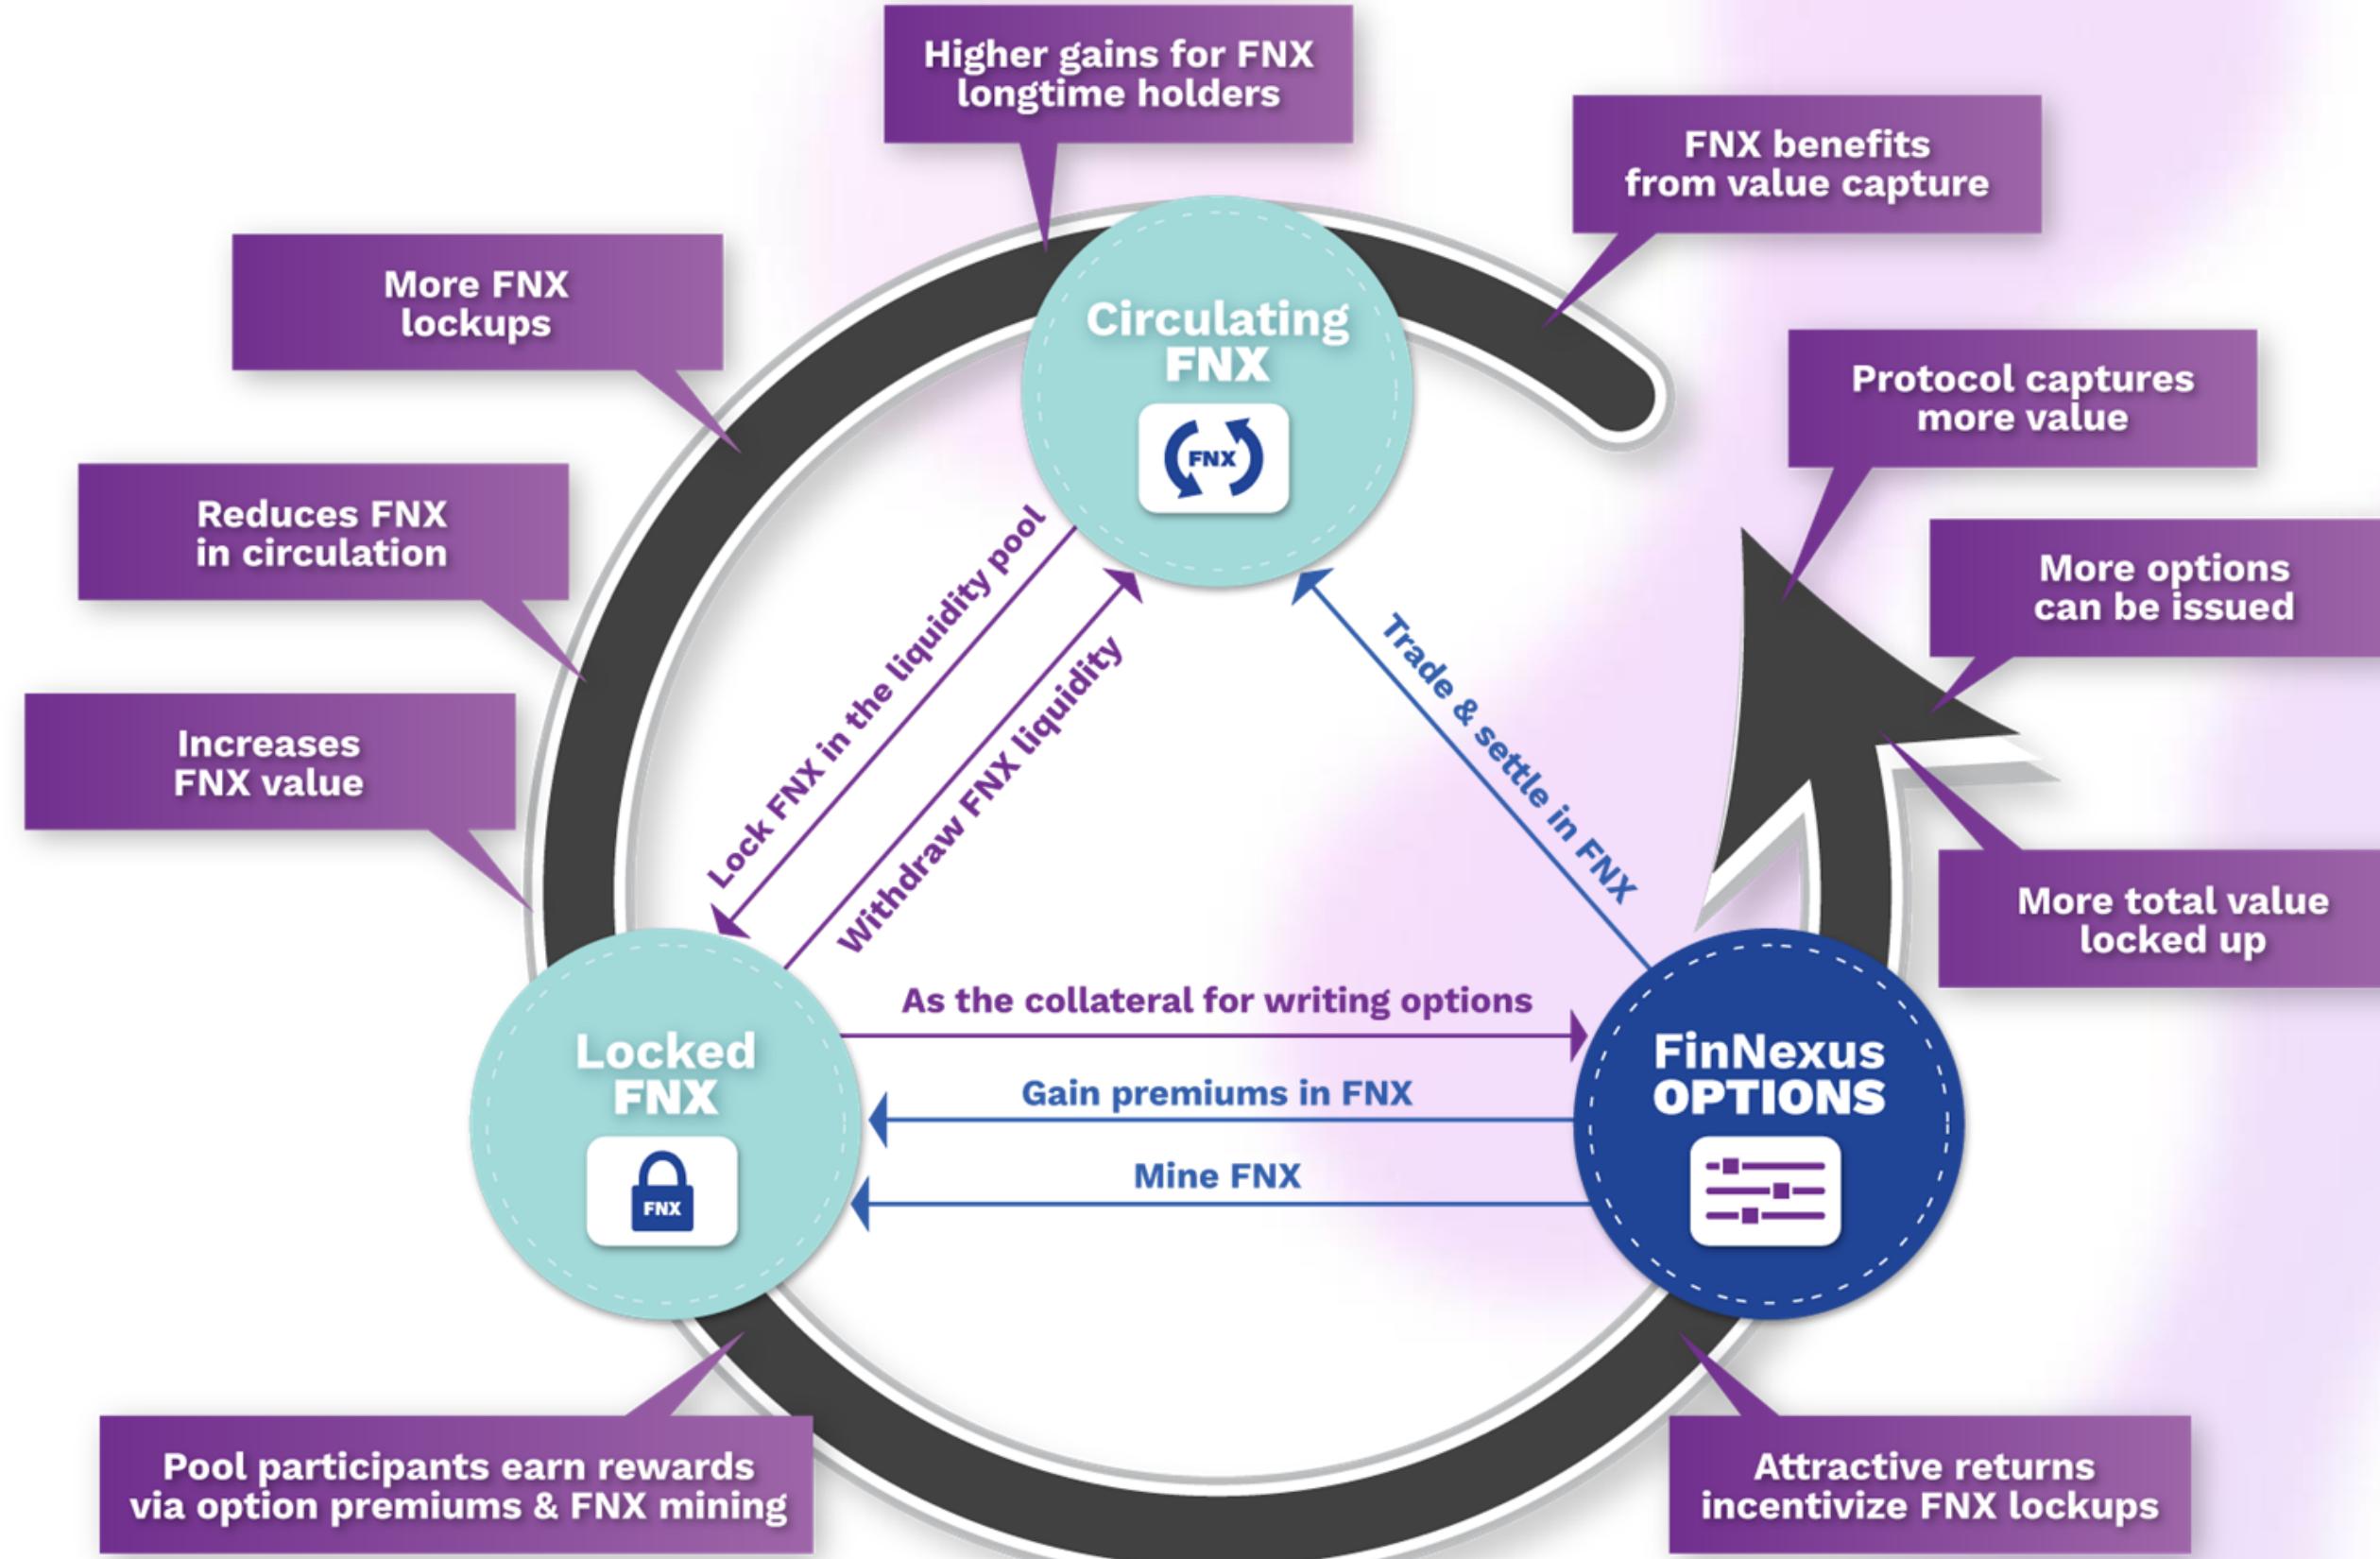

to bootstrap the initial trading liquidity and options pooled liquidity

- **Mining FNX** by providing liquidity in the Uniswap FNX/ETH Pool
- **Mining FNX** by joining in the liquidity pool in the FinNexus Protocol for Options v1.0

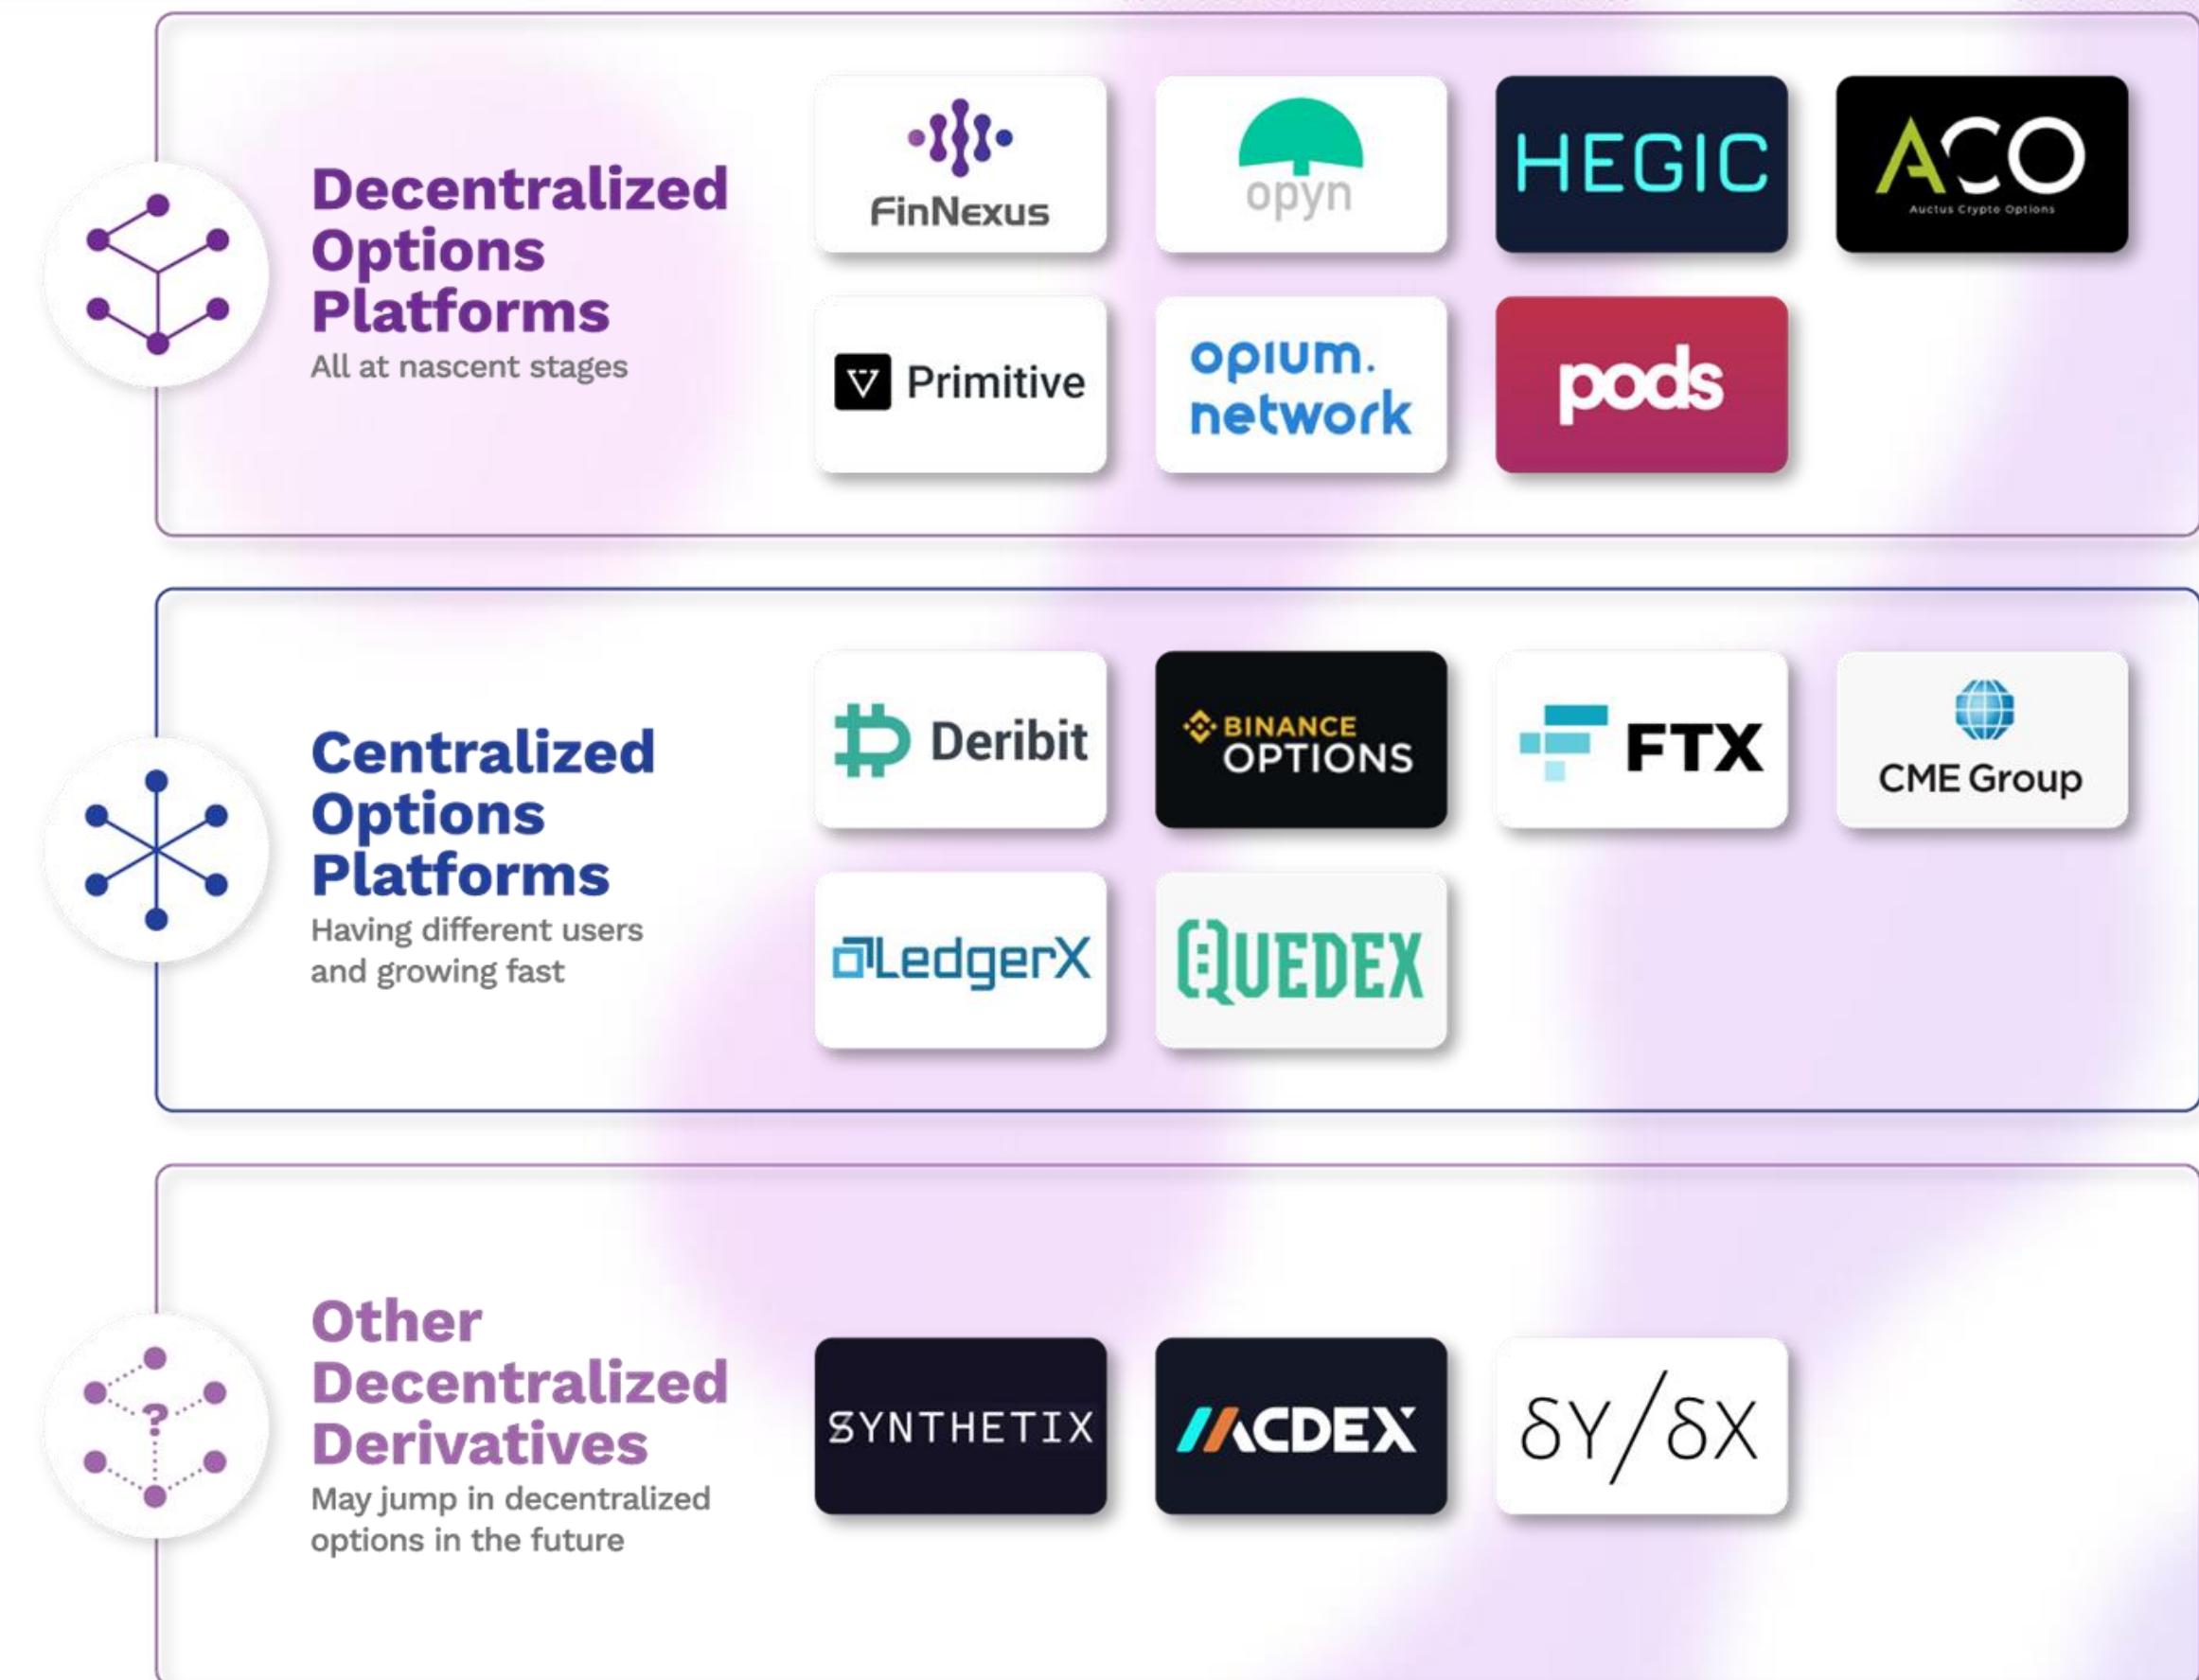

The FNX Token Circular Economy in FPO v1.0

Competitive Landscape

What Differentiates FinNexus?

- **Blue Ocean Strategy** - Pooled model decentralized derivatives are a Blue Ocean in the DeFi industry. Only Hegic currently offers a liquidity pool for options exposure and, even then, the model fractures liquidity across pools for different assets and for puts and calls.
- **Multi-chain compatibility** - All current competitors focus on Ethereum. FinNexus is ETH+.
- **Universal Options Model** - Our pooled liquidity and cash-settled options approach allows FinNexus to scale support for a variety of underlying assets quickly.
- **Robust Token Value Capture** - The FNX token should, at a minimum, reflect the value of the assets in its pools on each supported chain, multiplied by each pool's collateralization ratio.

Team

Core Team Members

BORIS YANG

Founder & CEO

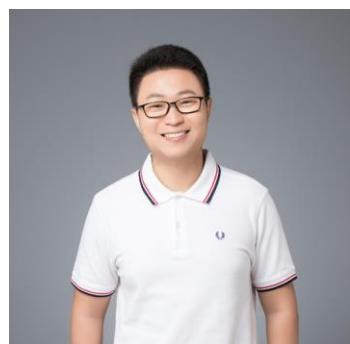

Blockchain veteran, Wanchain blockchain co-founder. Specializes in product design and business operations.

JACK TUNG

Regulatory Compliance Specialist

Senior Fintech Consultant specializing in framework design for legal compliance, with over 10 years of experience in asset management.

RYAN TIAN

Co-founder & CFO

Finance expert with 9 years of investment banking experience and 2 years of CFO in a multinational company. Specializes in financial product building and risk management.

NOAH MAIZELS

Global Marketing Manager

Bilingual Mandarin & English marketing professional with over seven years experience in the China market. A crypto watcher since 2011.

NICHOLAS KRAPELS

Co-founder & CSO

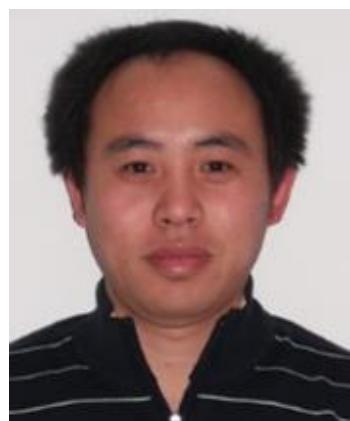

China-based American writer, educator, and entrepreneur. He teaches graduate courses in business strategy & entrepreneurship at Tongji University and SKEMA Business School. He is the Director of Growth & Strategy at Wanchain and Strategy Consultant for MANTRA DAO.

VEER SINGH

Public Relations Manager

An experienced community manager and content editor since 2018, with rich experience in multiple blockchain projects including Band Protocol and Orchid Protocol.

JIAN QIANG LU

CTO

A veteran software developer with 18 years' experience in software development and 4 years in blockchain, the Tsinghua graduate possesses in-depth expertise for large-scale software systems and blockchain coding.

Sarah Huang

Chief Community Manager

PhD in management science and engineering from Tianjin University. 4 years' marketing experience in the field of cryptocurrency. Rich experience in community operation with multiple blockchain projects including Newton.

The Global FinNexus Community

Advisory Team

JACK LU

Jack is a leading figure in the blockchain industry. He co-founded early Ethereum project Factom and is the founder & CEO of Wanchain

AARON CHOI

Aaron was the VP of international business at Bobby Lee's premier bitcoin exchange BTCC. He then became CEO of his own exchange. He now is VP of Global BD at Kava Labs.

EASON ZHANG

Eason is the founding partner of River Capital and a lifelong member of the China Youth Angel Investor Leader Association.

FNX Token Distribution

Categories	Items	Amount	Percentage	status	Time to Release/Burn	Duration of Release
Total supply	FNX Maximum Supply	500,000,000	100.00%	-	-	Coded in Smart Contract
Allocated to early contributors	Institutional Investors	8,333,333	1.67%	locked	August 26, 2020	12 months
	Team and Founding Investors	25,000,000	5.00%	locked	May 26, 2021	30 months
Reward Escrow	Reserves for mining incentives and DAO building	350,000,000	70.00%	Locked	TBD	unlock according to the mining incentives
Reserves	Insurance Pool	25,000,000	5.00%	locked	-	-
	Operation Reserves for marketing expenses, gas fees, salaries, etc.	22,340,567	4.47%	locked	May 26, 2021	60 months
	reserved for future token sales	25,000,000	5.00%	locked	TBD	TBD
Burned	ICTO Token Burned and Converted	30,580,313	6.12%	Burned	Burned before 2020-08-23	-
on the market	Circulation	13,745,786	2.75%	In circulation	-	-

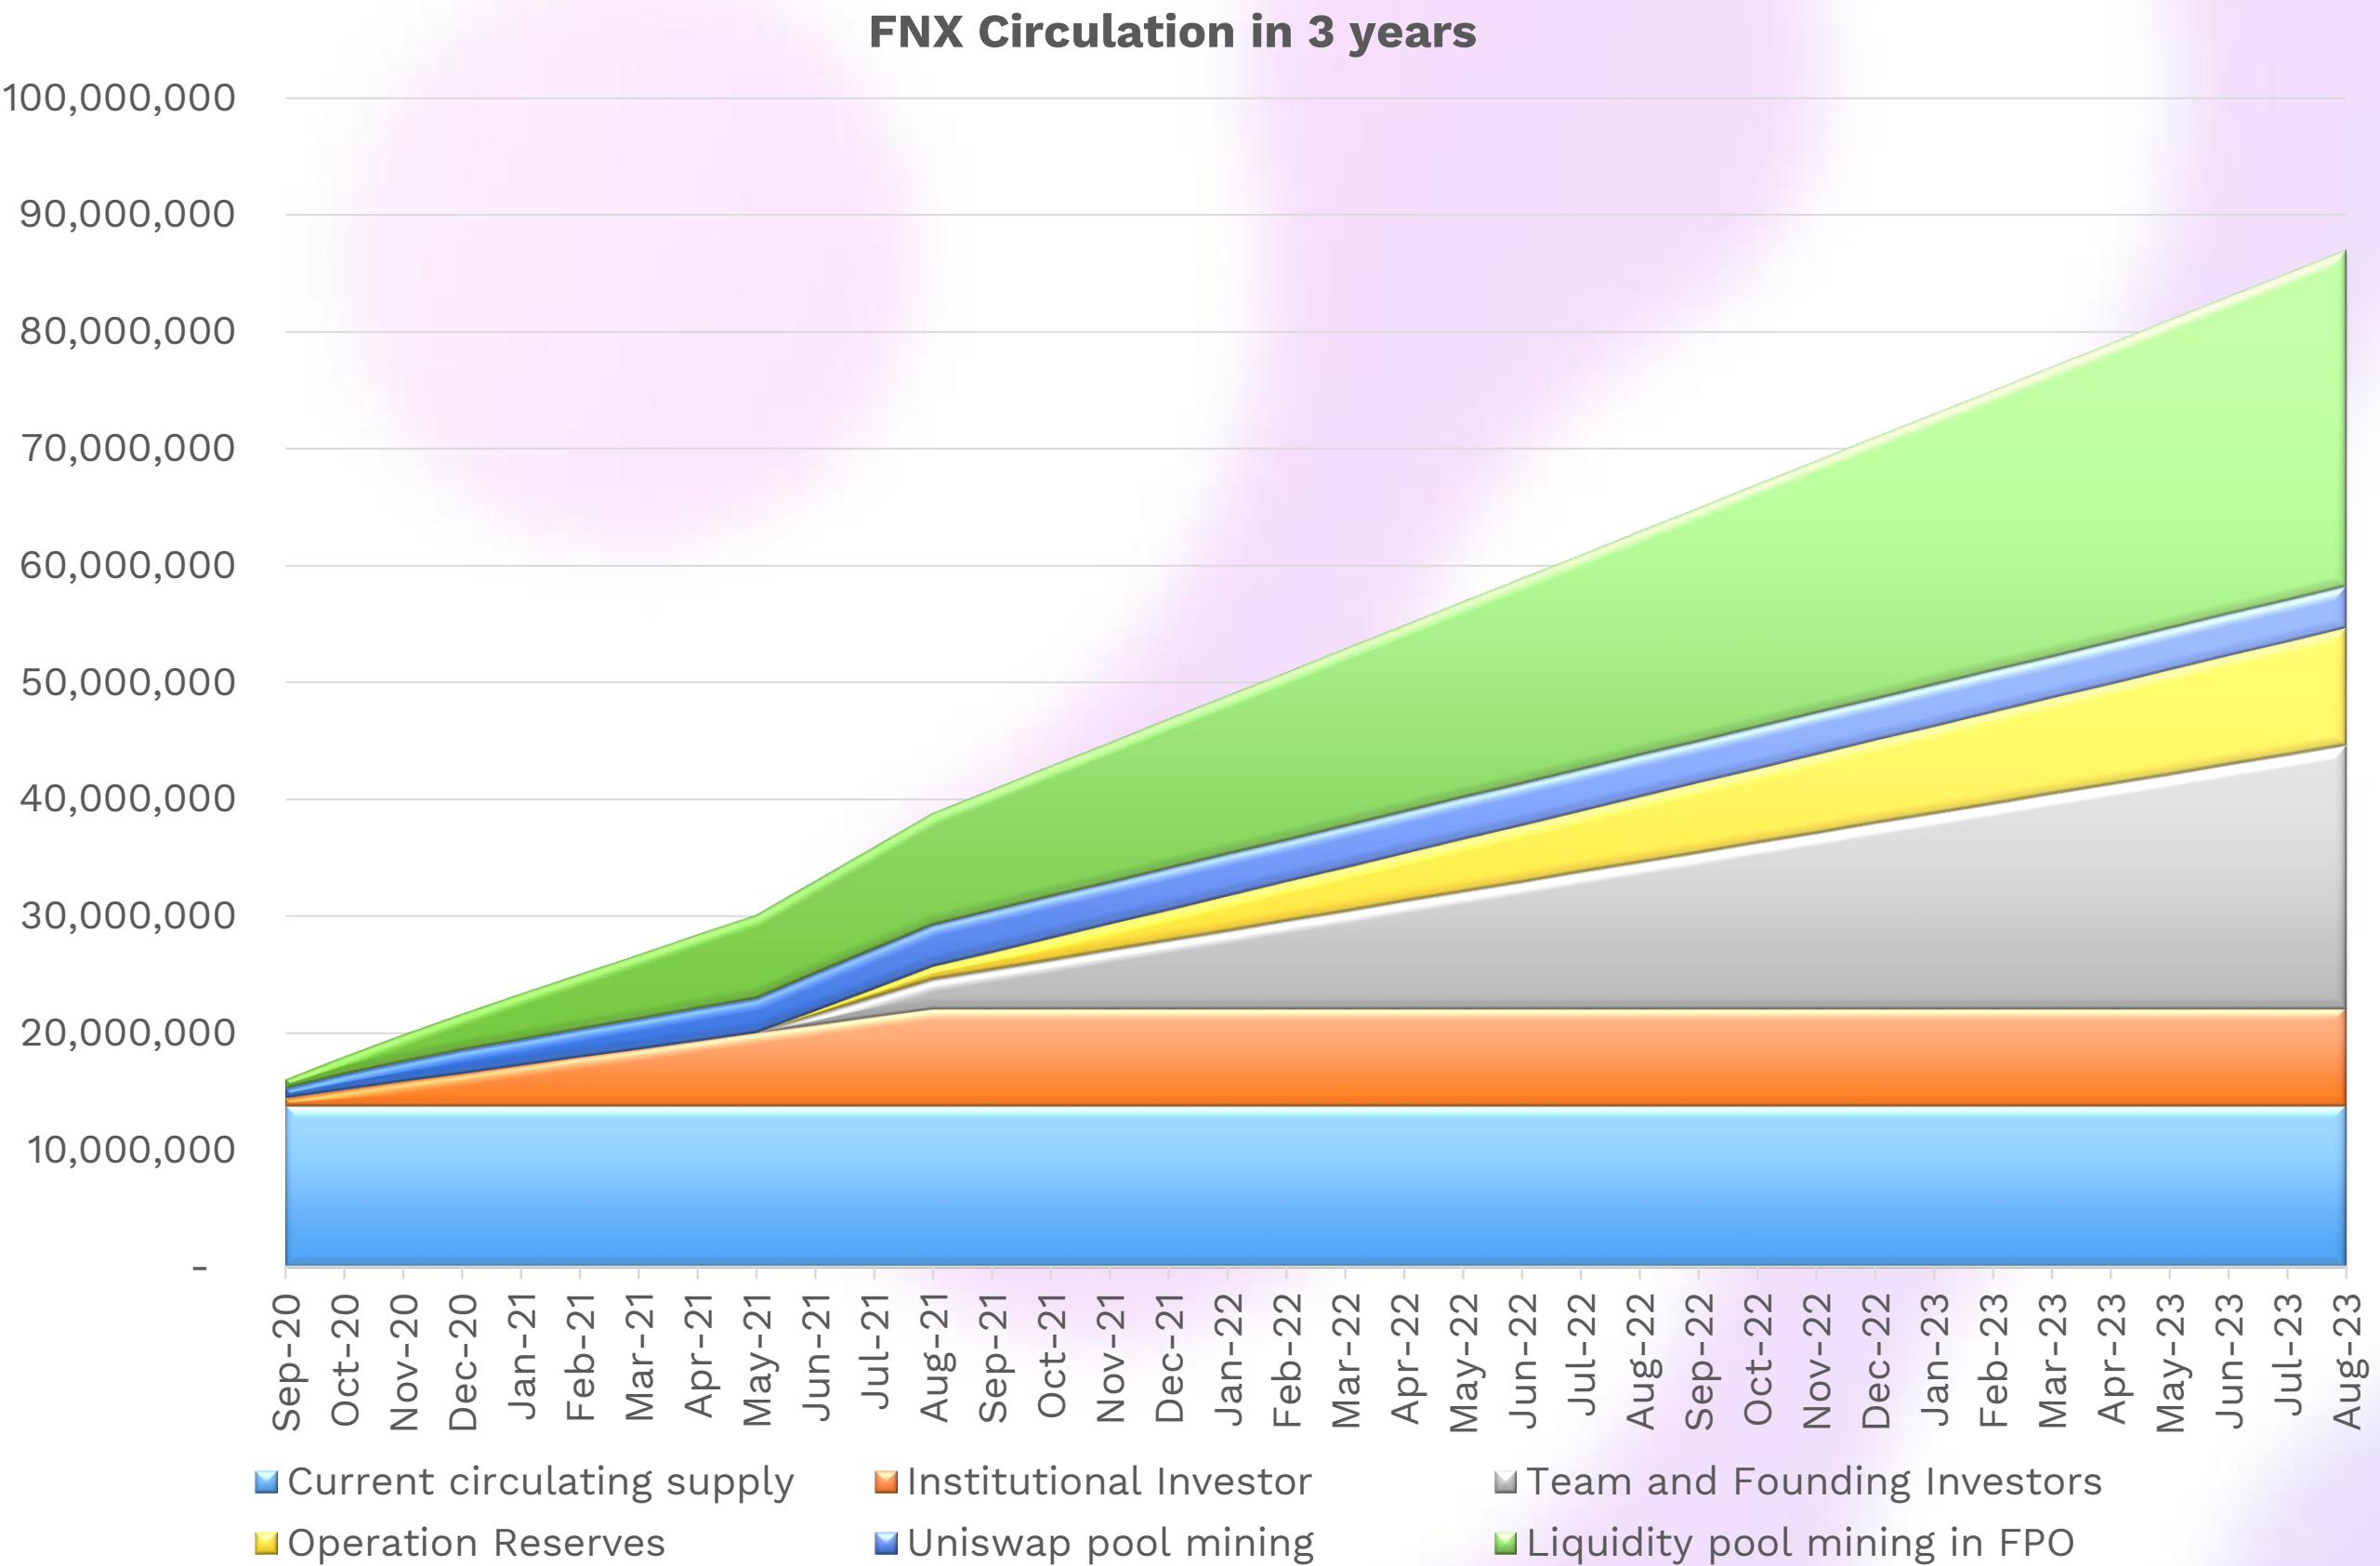

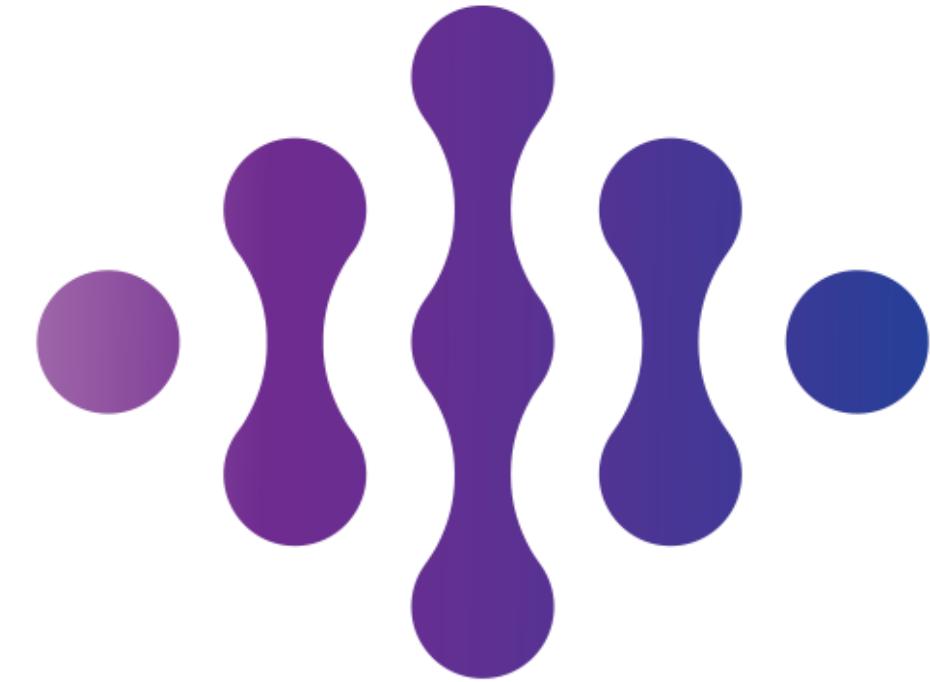

The FNX Token: A Truly Rare Asset

Circulating Supply in 3 years

Suppose:

- Uniswap pool mining will last for 1 year with 3.6m FNX as incentives.
- FPO liquidity mining will last for all the 3 years with 9.6m FNX as incentives per year.
- Even then, at the end of this theoretical 3-year period, the circulating supply would be less than 90m, or 18% of the maximum FNX supply.
